

Question 1:

JS - Credit card validation

Design an HTML page to perform phone number and credit card validation using javascript as shown in the screenshot.

Sample Screenshot 1:

Phone Number & Card Validation — h3 tag

Enter your Phone Number : — id="phoneNumber" onkeydown="checkPhoneNumber()"

Enter your Card Number : — id="cardNumber" onkeydown="checkCardNumber()"

— id="validate" onclick="validate()"

Sample Screenshot 2 :

If the phone number contains anything other than digits it must print 'Phone number must contain only digits' in the div with id 'phoneNumber_Warning'.

Phone Number & Card Validation

Enter your Phone Number : — Phone number must contains only digits

Enter your Card Number :

div with id="phoneNumber_Warning"

Sample Screenshot 3 :

If the card number contains other than digits it must print 'Card number must contain only digits' in the div with id 'cardNumber_Warning'.

Phone Number & Card Validation

Enter your Phone Number :

Enter your Card Number :

Card number must contains only digits

div with id="cardNumber_Warning"

Sample Screenshot 4 :

Phone Number & Card Validation

Enter your Phone Number :

Enter your Card Number :

Phone number must contains only digits

Card number must contains only digits

Sample Screenshot 5 :

If the Phone number does not contain 10 digits it must print 'Phone Number must be 10 digits' in the div with id 'phoneNumber_Warning'.

Phone Number & Card Validation

Enter your Phone Number : 9845232

Enter your Card Number : 7894551213278556

Validate

Phone Number must be 10 digits

div with id="phoneNumber_Warning"

Sample Screenshot 6 :

If the card number does not contain 16 digits it must print 'Card Number must be 16 digits' in the div with id 'cardNumber_Warning'.

Phone Number & Card Validation

Enter your Phone Number : 9845232878

Enter your Card Number : 7894551

Validate

Card Number must be 16 digits

div with id="cardNumber_Warning"

Sample Screenshot 7 :

If both phone and card numbers are validated, then print 'Details stored in database' in the div with id 'success'

Phone Number & Card Validation

Enter your Phone Number :

Enter your Card Number :

Details stored in database

 — id="success"

Note :

Content of the page should be present as shown in the screenshot.

Question 2:

JS - Add / Remove class

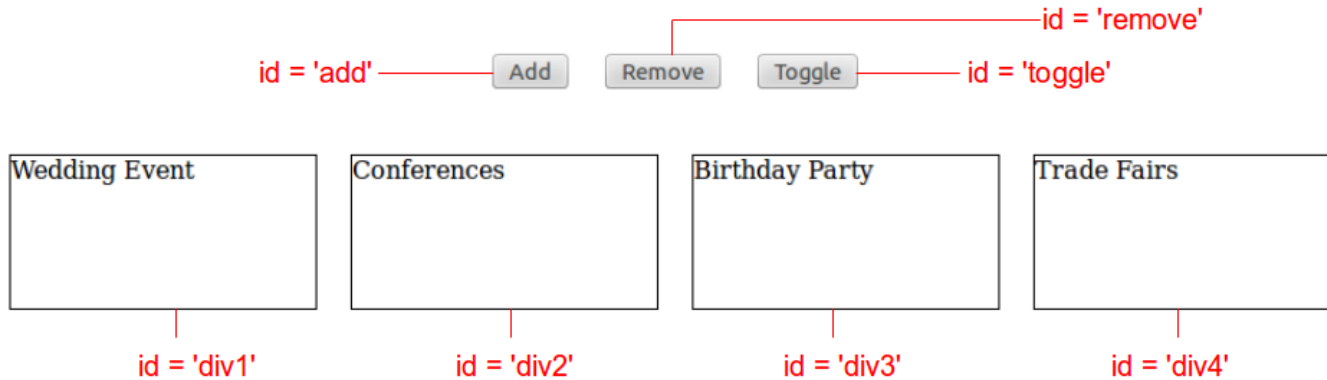

Design an HTML page to display the effects using Javascript as shown in the screenshots.

Hints : `classList` property

The `classList` property returns the class name(s) of an element, as a `DOMTokenList` object. This property is useful to add, remove and toggle CSS classes on an element. The `classList` property is read-only, however, you can modify it by using the `add()` and `remove()` methods. **Syntax :** `element = document.getElementById("idName"); element.classList.add("classProperty");` Similarly, `remove()` and `toggle()` methods were used.

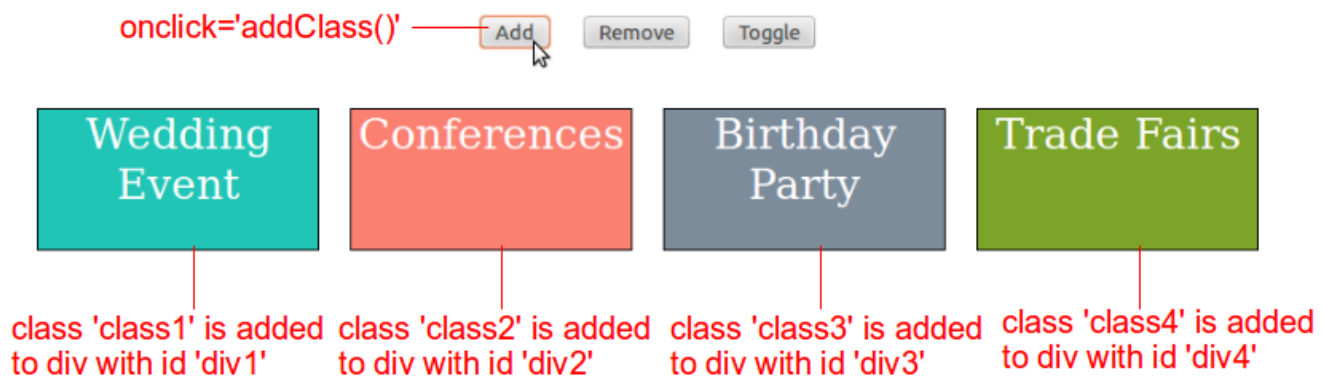

Sample Screenshot 1 :

Pink Frag Event Organization —h1 tag

Sample Screenshot 2 :

Pink Frag Event Organization

Sample Screenshot 3 :

Use width attribute for all the div is '200px'

Pink Frag Event Organization

Sample Screenshot 4 :

Pink Frag Event Organization

Sample Screenshot 5 :

Pink Frag Event Organization

Constraints :

Design the HTML page as given in the sample screenshot1.
The onClick functions should be specified the same as given in the screenshot.
Use add, remove and toggle methods.

Initially all div should be present with the below style

- border - 1px solid black
- width - 200px
- height - 100px
- background-color - none
- text-align - left

The class 'class1' should be present with the below style

- font-size - 30px
- background color - #20c5b5
- color - white
- text-align - center

The class 'class2' should be present with the below style

- font-size - 30px
- background-color - #FA8072
- color - white
- text-align - center

The class 'class3' should be present with the below style

- font-size - 30px
- background color - #7d8c9b
- color - white
- text-align - center

The class 'class4' should be present with the below style

- font-size - 30px
- background color - #7ba428
- color - white
- text-align - center

Conditions :

When clicking the Add button, apply effects for all the div's.

When clicking the Remove button, remove effects for all the div's.

When clicking the Toggle button, remove the applied effect if it has effects and vice versa.

Note :

Content of the page should be present as shown in the screenshot.
Kindly refer to the content which is given as a part of the description.

Question 3:

Event Management – JS Push & Pop

Write a function for popping the details from the list of events and pushing the details to the list of events. Display custom messages during every push and pop function.

The `push()` method adds new items to the end of an array and returns the new length. The new items will be added at the end of the array. The `pop()` method removes the last element of an array and returns that element. **Syntax :** `array.push(item1, item2, ..., itemX)` `array.pop()`

Sample Screenshot :

Events List

Enter the Events:

Constraints :

Events List

Enter the Events:

Events List

Enter the Events:

Added Successfully

Events List

Enter the Events:

Events List

Enter the Events:

Added Successfully

Events List

Enter the Events:

onclick = 'display()'

The Events in the array

- Wedding
- Conference
- Birthday party

id = 'events'

Events List

Enter the Events:

onclick = 'popElements'

Removed Successfully

id = 'events'

Events List

Enter the Events:

The Events in the array

- Wedding
- Conference

onclick = 'display()'

id = 'events'

Events List

Enter the Events:

Event array is empty

Additional Constraints :

Design the HTML page as given in the sample screenshot.
Refer to the screenshot for id, tag, and function name specifications.

Use **push()** and **pop()** method for adding and deleting the events in an array respectively.

If there are currently no events in the array while clicking the display button, display the custom message 'Event array is empty'

Note :

Content of the page should be present as shown in the screenshot.
Kindly refer to the content which is given as a part of the description.
